

MEGLUVET

SOLUTION FOR INJECTION

FLUNIXIN MEGLUMINE is a potent non-steroidal anti-inflammatory drug (NSAID), and a non-narcotic analgesic with anti-pyretic activity. It demonstrates potent inhibition of the cyclo-oxygenase system involved in the inflammatory pathway. The resultant decrease in production of certain inflammatory mediators accounts for its analgesic, anti-pyretic and anti-inflammatory properties.

Flunixin persists in inflammatory tissues and is associated with anti-inflammatory activity which extends well beyond the period associated with detectable plasma drug concentrations.

MEGLUVET is used in the alleviation of inflammation and pain associated with musculo-skeletal disorders and colic. In addition it is used for the control of acute inflammation reactions associated with infectious diseases. It is also applied as adjunctive therapy in the treatment of respiratory diseases.

COMPOSITION

Flunixin (meglumine)..... 50 mg
Excipient to..... 1 ml

INDICATIONS

- **Cattle:** Indicated for the control of acute inflammation and control of pyrexia associated with bovine respiratory disease.
- **Horses:** Indicated for the alleviation of inflammation and pain associated with musculo-skeletal disorders in acute and chronic states.

Indicated also for the alleviation of visceral pain associated with colic in the horse.

DOSAGE AND ADMINISTRATION ROUTE

Intravenous route.

- **Cattle:** 2 ml of MEGLUVET / 45 kg b.w. (2.2 mg of flunixin / kg b.w.), once daily for up to 3 consecutive days.
- **Equine:** For musculo-skeletal disorders at the following rate: 1 ml of MEGLUVET / 45 kg b.w. (1.1 mg of flunixin / kg b.w.), once daily for up to 5 consecutive days.
For colic at the following rate: 1 ml of MEGLUVET / 45 kg b.w. (1.1 mg of flunixin / kg b.w.), repeated once or twice if colic recurs.

WITHDRAWAL PERIOD

MEAT: Bovine: 14 days; Equine: 28 days

MILK: 24 hours

PRESENTATION

Vials of 100 ml and 250 ml
